

Create a Blog website

This Activity will challenge you to develop a website. You'll leverage the following technologies:

1. **React JS:** Create a Frontend for the blog website.
2. **Express JS:** Create the server using Express to connect with the database
3. **MongoDB:** Create a database for storing data and perform CRUD (Create, Read, Update, Delete) operations.

Tasks:

1. **Setting Up the Database:**
 - Create a new database and collections.
 - Add documents to the collections
2. **Connecting to the Database:**
 - Create the server-side using node js and express js.
 - Connect with MongoDB.
3. **Client-side:**
 - Create the front end by using React JS.
 - Create different components.

Deliverables:

- Documentation explaining each step of the process, including screenshots or visuals where relevant.

Bonus Challenge:

- Receive data from the user and store it in the back-end (eg: comment section)
