

Interactive Music and Entertainment Website

Design and develop a single-page website for a fictional service called "myTunes," which offers music streaming, video content, and gift cards. The website should be engaging, visually appealing, and user-friendly, featuring smooth navigation and interactive elements.

Tasks:

1. Website Sections:

- **Hero Section:** Present a prominent heading, a subheading, and an introductory paragraph that highlights the core offering of myTunes.
- **Music Section:** Describe the music streaming service with an emphasis on features such as ad-free streaming, offline downloads, and a call-to-action button. Include an image showcasing devices compatible with the service.
- **About Music Section:** Provide information about the movie and TV show catalog with a brief description and a secondary call-to-action button.
- **Video Section:** Feature details about video content availability, supported by a background image.
- **Gift Card Section:** Display information about gift cards, including an image and a call-to-action button for redeeming them.
- **Footer:** Include links to various categories such as "Shop & Learn," "Orange Store," "Education & Business," and "About Orange."

2. Functionality:

- **Smooth Navigation:** Ensure that clicking on navigation links smoothly scrolls to the corresponding sections of the page.
- **Button Interactivity:**
 - Provide visual feedback by changing the appearance of primary buttons when clicked.
 - Implement alert messages or similar interactions for secondary buttons.

3. Requirements:

- The website should be visually consistent with the chosen color scheme and layout.
- Ensure that all sections are accessible and correctly linked.
- The design should be responsive, accommodating various screen sizes and devices.

Deliverables:

- Fully functional website with all required sections and interactive elements.
- Documentation explaining the setup and testing procedures.

Bonus Challenge

Live Chat Support:

- **Feature:** Integrate a live chat support widget into the website that allows users to chat with a support representative or a chatbot for assistance. The widget should be accessible from any section of the site and feature a minimized icon that expands to show the chat interface when clicked. Ensure that the chat feature is styled consistently with the website's design and includes basic functionalities such as sending and receiving messages, and automated responses for common queries.

User Account Management:

- **Feature:** Implement a basic user account management system allowing users to register, log in, and manage their profiles. Include features such as profile picture upload, password reset functionality, and the ability to view and update personal information. The user interface should be intuitive and styled to match the overall design of the website.
